Salar Synthetic Series - Glitz

Art. nr. 44607

Glitz is a long fiber flash dubbing with extreme characteristics. Unlike the usual SSS dubbing that is built on transluscent synthetic fibers, Glitz is built up of flash fibers in several qualities and colors. A dubbing mix may contain up to 15 different types of fibers. All helping to achieve those perfect glittering seductive characteristics without tangles of fibres.

Of course, Glitz is a dubbing with fibers that are long enough to be brushed to perfection, even on the largest of flies. It is well suited for larger salmon and sea trout flies. It creates saltwater flies and sculpins beyond your wildest dreams. It sparkles and shines more than any other dubbing! Glitz - when you want your big flies to stand out!
